

INTERIOR LINING PRODUCT LIST

	<p>Villaboard Lining</p>	<p>Villaboard™ is a heavy-duty wall lining compared to plasterboard. Ideal for use in bathrooms and wet areas, if the waterproofing fails you can rest assure that Villaboard won't. Resistant to damage from moisture, it won't deform or lose its structural integrity which means fewer call backs and less costly rectifications.</p>	<p>The standard in bathroom wall sheeting for 50 years.</p>
	<p>HardieGroove Lining</p>	<p>Create beautiful and stylish interior walls, ceilings, eaves and soffits with HardieGroove™ Lining – a durable fibre cement VJ sheet panel that gives the look of tongue and groove timber with the durability of fibre cement. The elegant, uniform panels are free of knots and won't shrink or swell with moisture, unlike timber or craft wood VJ panels.</p>	<p>The durable and elegant vertical joint (VJ) sheet panels.</p>
	<p>ARChitectural Inraw Panel</p>	<p>A cutting edge design choice for trendy restaurants and foyers that want to make a statement. ARChitectural™ Inraw Panel is a pre-finished, clear-coated fibre cement sheet with the look of raw concrete and a warm, natural aesthetic. Resistant to fading, yellowing, cracking and peeling, ARChitectural also provides resistance to surface scratching, abrasion and wear.</p>	<p>A clear-coated fibre cement sheet with the beauty of raw concrete.</p>

	<p>PineRidge Lining</p>	<p>Designed for residential living areas, hallways, garages and workshops where a durable timber-panel look is desired or required, PineRidge™ Lining is a high-quality, timber-textured woodgrain interior wall lining sheet. The high impact resistance of PineRidge lining, compared with timber, makes it the smart choice for high-traffic areas as the texture helps conceal minor damage.</p>	<p>Woodgrain textured vertical joint fibre cement sheet.</p>
	<p>Versilux Lining</p>	<p>As a versatile interior wall sheet, Versilux™ Lining can be used in laundries, kitchens and high-traffic areas. It is also popular when used as a soffit and can be installed in exposed beam ceilings. Unlike Villaboard, Versilux is square on the long edges for making butt joints and accessory joints doing away with set joints that require extra finishing time and cost.</p>	<p>A square edge sheet ideal for geometric designed soffits.</p>
